

Flight Alert Startup — Problem & Solution Document

Startup Concept

A WhatsApp-based flight price tracking assistant that monitors airfare prices and instantly alerts users when fares drop below their preferred budget.

Problem Statement

- Users repeatedly check flight prices manually.
- People miss sudden airfare deals.
- Travel apps require active monitoring.
- Users feel price anxiety and fear of missing out.

Proposed Solution

- Users send travel preferences via WhatsApp.
- The bot continuously monitors flight prices.
- Users receive instant alerts when prices drop.
- The experience is proactive and frictionless.

Target Users

- Budget travelers
- Students
- Solo travelers
- Frequent flyers
- Remote workers

Why WhatsApp?

WhatsApp has extremely high engagement in India. Users are more likely to open and respond to WhatsApp messages than emails or app notifications.

MVP Scope

- WhatsApp bot only
- No mobile application initially
- Track source and destination
- Budget-based alerts
- Flexible travel date tracking

Future Opportunities

- AI-based fare prediction
- Visa alerts
- Nearby airport optimization
- Travel deal communities
- Premium instant alerts

Monetization Strategy

- Affiliate commissions from travel bookings
- Premium travel alerts
- Partnerships with airlines and travel agencies

Success Metric

The first validation metric is whether users genuinely find the fare alerts useful and exciting enough to continue using and sharing the product.
